In-Depth LinkedIn Optimization With Marketing Management Techniques

Canadian Logistics Industry

Maria Juliana Velasquez Recio

[Department, Institution]

MRKT-621: Marketing Management

[Instructor Name]

[Assignment Due Date]

In-Depth LinkedIn Optimization With Marketing Management Techniques

This paper applies marketing management techniques to my professional brand on LinkedIn, using Canadian logistics, and freight transportation in particular, as the market in which I want to be hired, so that the analysis of the industry and of its job requirements can guide the way I present my experience to the recruiters and operations managers who make hiring decisions in Metro Vancouver.

Research and Analysis

Target Industry: Canadian Logistics

This project examines logistics in Canada, with particular attention to freight transportation and to the digital services through which firms book and coordinate their shipments. Innovation, Science and Economic Development Canada (2018) defines logistics as the planning, implementation, and control of the movement and storage of goods, services, and related information, a set of activities that in business practice connects suppliers, production sites, warehouses, carriers, and customers. Although freight transportation is central to that process, reliable distribution also depends on inventory control, on order processing, and on the exchange of accurate information among everyone involved in a shipment.

The industry is closely tied to the domestic economy and to international trade, as transportation and warehousing contributed CAD 96.5 billion, or 4.3% of national GDP, in 2024 (Transport Canada, 2025b). In that same year Canada's international merchandise trade reached approximately CAD 1.55 trillion, of which, measured by value, road transportation carried 46%, marine transport 21.1%, air 11.6%, and rail 10.5%, so the first set of figures describes the output of the transportation and warehousing sector, whereas the second describes the value of the merchandise flows that the network moves.

Mordor Intelligence (2026) estimates that freight transportation accounted for 60.88% of the Canadian freight and logistics market in 2025, and that share, combined with the growing use of digital freight marketplaces, makes this field a reasonable starting point for examining employers and the qualifications they look for. Freightera, a Vancouver-based business-to-business platform on which shippers compare and book freight, offers a useful example of this type of service (Freightera, n.d.-a).

Historical Market Performance, 2021–2025

Ken Research (n.d.) estimates that the market increased from USD 97 billion in 2021 to USD 112 billion in 2025, a cumulative gain of approximately 15.5%, and more than half of that USD 15 billion increase came in 2022 alone, since annual growth stayed below 3% from 2023 onward.

Table 1

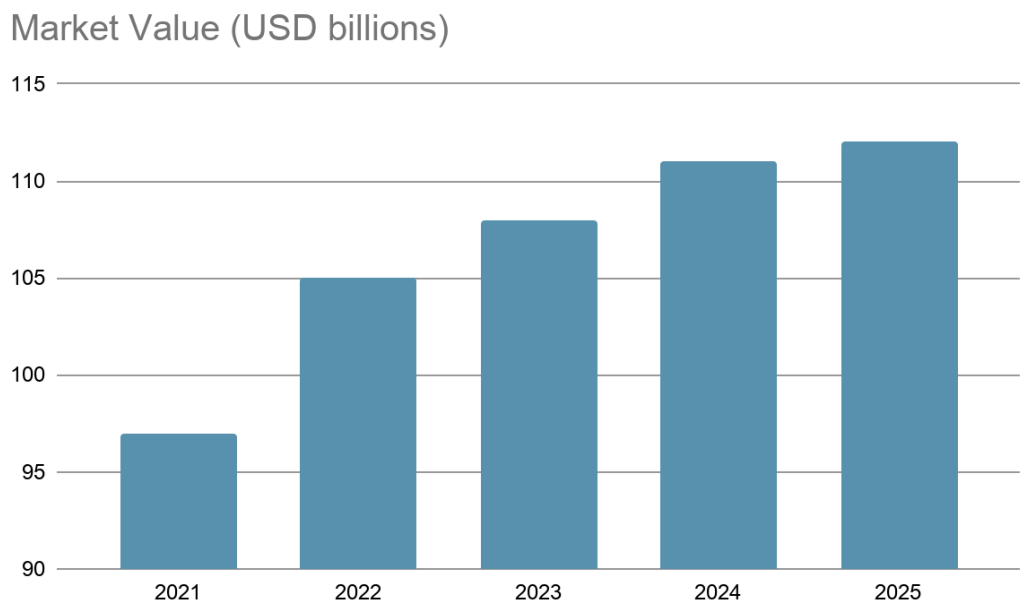

Estimated Canadian Logistics Market Value, 2021–2025

Year	USD billions	Year-over-year growth
2021	97	7.8%
2022	105	8.2%
2023	108	2.9%
2024	111	2.8%
2025	112	0.9%

Note. Data from Ken Research (n.d.).

Figure 1

Estimated Market Value of the Canadian Logistics Industry, 2021–2025

Note. Data from Ken Research (n.d.).

2021: Recovery Exposed Supply-chain Weaknesses

Freight demand recovered as commercial activity resumed after the initial COVID-19 restrictions, and Transport Canada (2022) documented higher port container traffic and more truck crossings than in 2020 as trade flows returned. The transportation network nevertheless remained vulnerable, because container scarcity, overseas shipping delays, wildfires, and severe flooding in British Columbia disrupted key routes, and end-to-end container transit from Shanghai to Toronto through West Coast ports averaged 34.5 days that year, well above the 25.9 days recorded for 2019 in Transport Canada's historical series (Transport Canada, 2026).

2022: Strong Market Value, Persistent Congestion

In 2022 the market estimate rose to USD 105 billion, the strongest annual growth of the period (Ken Research, n.d.). Upheaval in world supply markets supported export demand for

Canadian commodities, while imported goods continued to put pressure on terminals and inland connections (Transport Canada, 2023), and the average container journey from Shanghai to Toronto reached 39.9 days, the longest of the five years reviewed (Transport Canada, 2026). Because freight prices and capacity constraints contributed to the higher market value, that value should not be read as proof of better service or of larger physical volumes.

2023: Weaker Goods Demand and Labour Disruption

Growth slowed to 2.9% in 2023 as inflation, higher financing costs, and softer spending reduced demand for some imported and industrial goods (Ken Research, n.d.; Transport Canada, 2024). The July labour dispute at British Columbia ports was especially disruptive, since merchandise imports cleared through those ports fell 18.5% relative to June and exports departing them fell 23.0%, according to figures that Statistics Canada (2023) did not seasonally adjust, and although transit from Shanghai to Toronto improved to 35.0 days, part of that relief reflected the reduced congestion that came as demand eased (Transport Canada, 2026).

2024: Recovery Differed by Corridor

The market estimate reached USD 111 billion in 2024, an increase of 2.8% (Ken Research, n.d.), while freight volumes recovered in several transport modes with results that varied across Canadian gateways, as Transport Canada (2025a) reported higher container activity at major ports alongside continued interruptions from labour disputes and extreme weather. Online retail, for its part, remained a meaningful source of distribution demand, since Statistics Canada (2026a) measured CAD 73.7 billion in e-commerce operating revenue for 2024, a figure 9.0% above that of 2023.

2025: Trade Reorientation Reshaped Freight Flows

Although the market estimate edged up just 0.9% in 2025, to USD 112 billion (Ken Research, n.d.), the geography of freight changed considerably, as Transport Canada (2026) found that Canadian merchandise exports to the United States fell about 5% while exports to other markets climbed roughly 16%. Truck entries into Canada decreased by about 5% and U.S.-linked rail freight weakened, but marine gateways gained from overseas trade, with the Port of Vancouver handling a record 170.4 million metric tonnes, 8% more than in 2024, and with container transit from Shanghai to Toronto improving to 33.3 days, although it remained noticeably slower than in 2019 (Transport Canada, 2026).

Interpretation of the Historical Trend

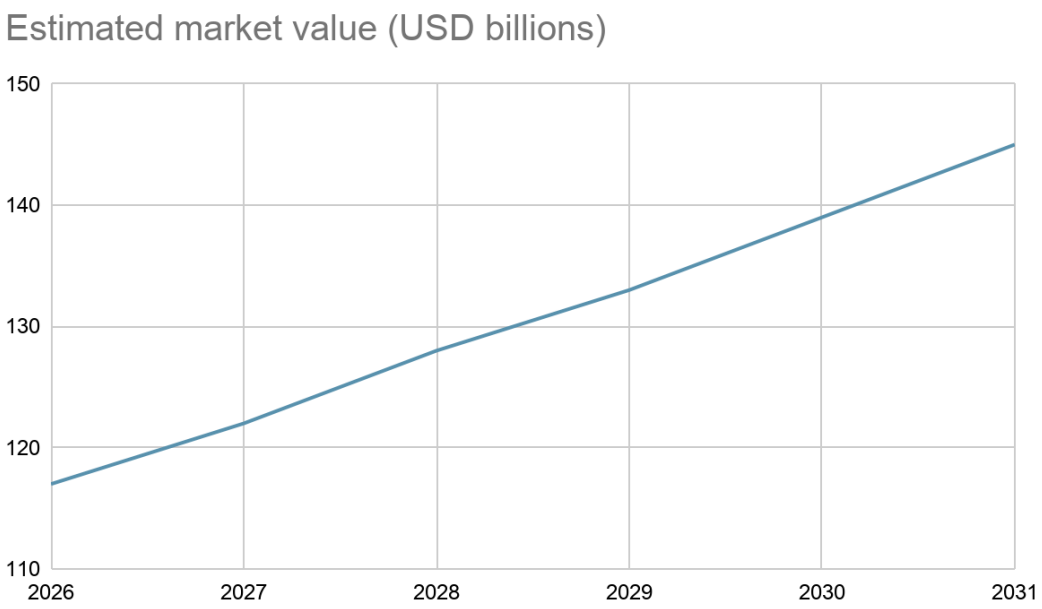

Over these five years, a rebound in demand first exceeded the practical capacity of parts of the network, after which shipping conditions normalized, freight activity weakened on some routes, and service reliability gradually improved, until by 2025 trade policy was changing the geography of freight demand, putting transborder trucking under pressure while ocean-oriented corridors gained business. For employers, this history makes shipment visibility, contingency planning, customer communication, and adaptable routing more valuable than a narrow focus on shipment growth alone.

Current Market and Outlook, 2026–2031

Mordor Intelligence (2026) places the freight and logistics market at USD 111.66 billion in 2025 and USD 116.63 billion in 2026, and its forecast reaches USD 145.05 billion by 2031, which implies a compound annual growth rate of 4.45%.

Figure 2

Projected Canadian Logistics Market Value, 2026–2031

Note. Data from Mordor Intelligence (2026); intermediate years follow the 4.45% compound annual growth rate implied by the forecast.

Conditions during 2026 help explain both the opportunity and the risk contained in that projection, since real GDP increased 0.8% in the second quarter, supported by exports, spending, and investment (Statistics Canada, 2026b), while the Bank of Canada (2026) projects 1.0% real GDP growth for the year and warns of persistent energy-price pressures and uncertainty over U.S. trade policy. Its October report also forecasts annual inflation of 2.9% in 2026 and 3.1% in 2027, so higher fuel and input costs could compress the margins of road-freight operators even if the nominal value of logistics services continues to rise.

Online commerce is likely to sustain demand for fulfilment, warehousing, and parcel delivery, as Mordor Intelligence (2026) forecasts faster growth in courier, express, and parcel services than in the overall market, a projection consistent with the expansion of online retail

documented by Statistics Canada (2026a). Trade diversification, in turn, supports port, rail, and intermodal services, particularly when exporters need alternatives to the established U.S.-focused corridors (Transport Canada, 2026).

Digital systems can help companies plan routes, track exceptions, and coordinate shipments, although their value depends on how well they are integrated into daily workflows and on the capabilities of the employees who use them, and freight marketplaces such as Freightera already show how shippers can compare carriers and manage documentation online (Freightera, n.d.-a). Environmental performance also remains material, considering that transport was responsible for approximately 22% of Canada's greenhouse gas emissions in 2024, including both passenger and freight activity (Transport Canada, 2026), which means that fuel efficiency, network utilization, and lower-emission modes could become competitive considerations for logistics providers alongside price and service.

In light of these conditions, the outlook can be described as cautiously positive, because demand is expected to shift toward specialized, data-enabled services even though labour availability, energy costs, climate-related disruption, and North American trade conditions may affect the pace of growth.

Market Segmentation and Selected Segment

For the purpose of this assignment, logistics is segmented by service rather than by customer demographics, following the distinction that Mordor Intelligence (2026) draws between freight transportation, freight forwarding, warehousing and storage, and courier, express, and parcel services.

Table 2

Main Service Segments of Canadian Freight and Logistics

Segment	Core activities	Employment relevance
Freight transportation	Truck, rail, air, and sea movement	Dispatch, routing, fleet and transport coordination
Freight forwarding	Arranging domestic or international shipments	Carrier selection, documentation and customer service
Warehousing and storage	Inventory storage and order handling	Warehouse supervision, inventory and reporting
Courier, express, parcel	Time-sensitive packages and last-mile delivery	Hub operations and distribution planning

Note. Segments from Mordor Intelligence (2026).

I selected freight transportation, with an emphasis on road freight and digital brokerage, because in addition to generating 60.88% of market revenue in 2025, this segment relies heavily on road freight, which Mordor Intelligence (2026) estimates represented 60.97% of freight transportation revenue. Freightera, whose platform offers LTL, FTL, flatbed, and cross-border options, illustrates how this segment operates in practice (Freightera, n.d.-a).

Leading Companies Operating in Canada

Table 3 compares major Canada-based transport groups with multinational operators relevant to my target career paths, and its financial figures must be read with care, since the consolidated results of CN, CPKC, and TFI include operations outside Canada and multinational companies such as FedEx, UPS, DHL, and Amazon do not report a directly comparable Canada-only logistics revenue measure in the sources examined.

Table 3

Selected Logistics Employers and Main Activities

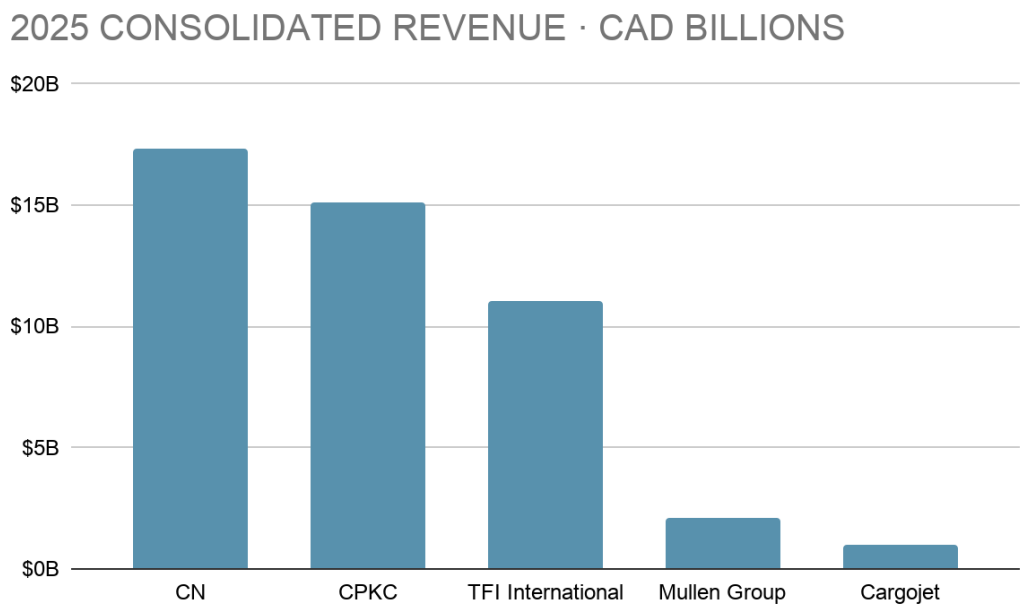

Company or group	Principal activity
CN	Rail freight and intermodal services

Company or group	Principal activity
CPKC	Rail freight across Canada, the United States, and Mexico
TFI International	Truckload, LTL and transportation services
Mullen Group	Trucking, logistics and warehousing
Cargojet	Air cargo services
Canada Post / Purolator	Postal, courier and parcel delivery
FedEx / UPS / DHL	Express delivery, freight and contract logistics
Amazon	E-commerce fulfilment and distribution
Freightera	Digital freight marketplace and shipment coordination

Among the five transport companies selected for financial comparison, CN reported CAD 17.304 billion in 2025 revenue, ahead of CPKC at CAD 15.078 billion (Canadian National Railway, 2026; Canadian Pacific Kansas City, 2026), while TFI International reported USD 7.885 billion, which, converted at the Bank of Canada's 2025 average rate of CAD 1.3978 per U.S. dollar, amounts to approximately CAD 11.02 billion (Bank of Canada, n.d.; TFI International, 2026). Mullen Group and Cargojet followed with CAD 2.134 billion and CAD 0.993 billion, respectively (Cargojet, 2026; Mullen Group, 2026).

Figure 3

2025 Consolidated Revenue of Selected Freight Transportation Companies

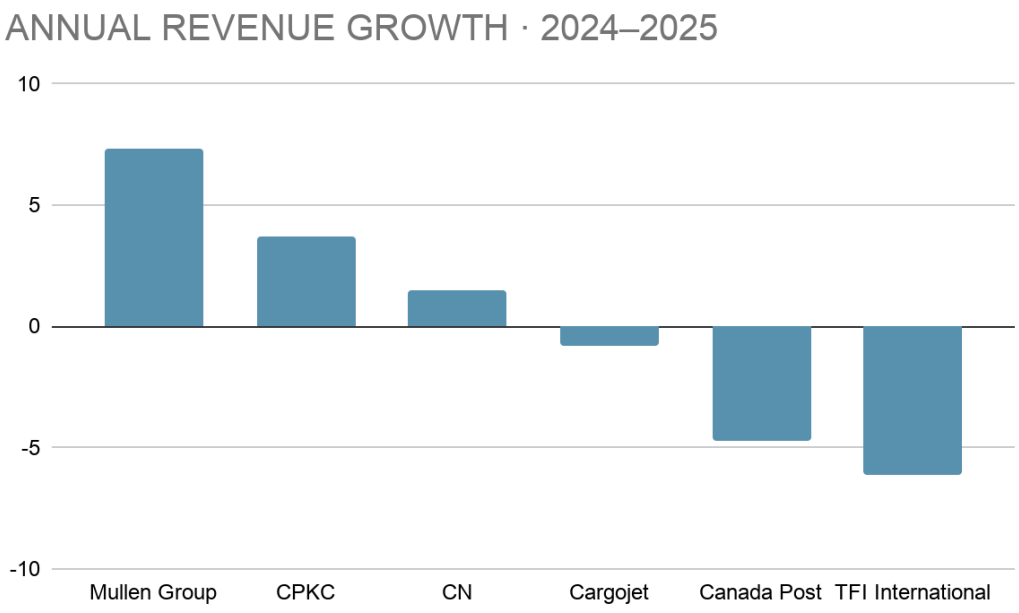

Note. TFI International revenue converted from USD 7.885 billion at CAD 1.3978 per U.S. dollar (Bank of Canada, n.d.); other values from the company reports cited in the text.

When revenue growth is compared instead of revenue size, the order of the companies changes considerably. Mullen Group posted a 7.3% increase in 2025, which its management attributed to acquisitions rather than to stronger underlying freight demand (Mullen Group, 2026), while CPKC grew approximately 3.7% and CN 1.5%, and Cargojet and TFI International reported declines of around 0.8% and 6.1%, respectively (Canadian National Railway, 2026; Canadian Pacific Kansas City, 2026; Cargojet, 2026; TFI International, 2026). Canada Post's revenue fell 4.7%, reflecting labour uncertainty and lost parcel business (Canada Post, 2026), and since these percentages compare different business models and revenue bases, the annual changes in Figure 4 should not be read as a ranking of operational efficiency.

Figure 4

Annual Revenue Growth for Selected Logistics Companies, 2024–2025

Note. Percentage change in reported annual revenue; sources as cited in the text.

I treat Freightera separately because its digital marketplace illustrates the type of freight coordination I want to pursue, and the 31.4% revenue growth it reported in May 2025 refers to fiscal 2024 (Freightera, 2025), a different period from the other results, which is why it does not appear in Figure 4.

Target Jobs and Employment Requirements

To see how requirements change across operating environments, I began with a national sample of job advertisements covering dispatch and coordination, operational supervision, digital systems, and cargo handling, which is summarized in Table 4.

Table 4

LinkedIn Job Sample and Selected Qualifications

Employer / job	Education or experience	Skills / certifications
CPKC · Assistant Trainmaster	Secondary school or equivalent; rail operating background an asset	Train/yard plans, compliance, staff supervision; conductor qualification may need to be obtained or maintained
TFI / Normandin Transit · Logistics Coordinator	High school required; transportation experience and postsecondary study are assets	Shipment tracking, TMS, Microsoft Office, customer communication; bilingualism an asset
Canada Post · Supervisor, Operations Relief	High school; 1 year managing a team OR 2 years in a unionized workplace	Daily scheduling, safety, productivity reports, Microsoft Office; postsecondary education an asset
Purolator · Operations Coordinator Hub Yard	No fixed diploma or years of experience stated; linehaul knowledge preferred	Yard checks, equipment assignments, numeracy, English and communication
Mullen Group · Senior Transportation Applications Specialist	Postsecondary study in logistics/business/IS or equivalent experience	TMS, ERP integration, analytics, troubleshooting and user training
FedEx Canada · Operations Administrator II	High school/GED and 2 years customer service, clerical or related experience	Documentation, data entry, customer service and Microsoft Office
UPS · Distribution Supervisor I	Secondary school; warehouse experience typically requested	Inventory, warehouse staff coordination, safety and reporting
DHL Supply Chain · Operations Supervisor, Distribution	Operations or leadership experience; education requirements vary	KPI monitoring, workforce planning, safety and continuous improvement
Amazon · Area Manager II	Leadership experience and one of the education/service routes in advertisement	Team leadership, performance metrics, process improvement; Lean experience an asset

Note. Advertisements are listed with links in Table A3.

Across the sample, coordination and customer-facing roles repeatedly call for accurate documentation, Microsoft Office, shipment monitoring, and communication, while supervisory positions add staff management and safety accountability, and the more specialized opportunities require knowledge of railway rules, air cargo procedures, or transportation software. For profile optimization, this difference means that a broad logistics headline may attract general attention, whereas concrete evidence of coordination, reporting, and systems knowledge is more directly

relevant to the entry and intermediate roles selected here (Government of Canada, n.d.-a; see Appendix A).

On that basis, I narrowed my search to Logistics Coordinator, Transportation Coordinator, Operations Coordinator, and comparable operations-support roles, while keeping Inventory Coordinator and distribution roles as a secondary option.

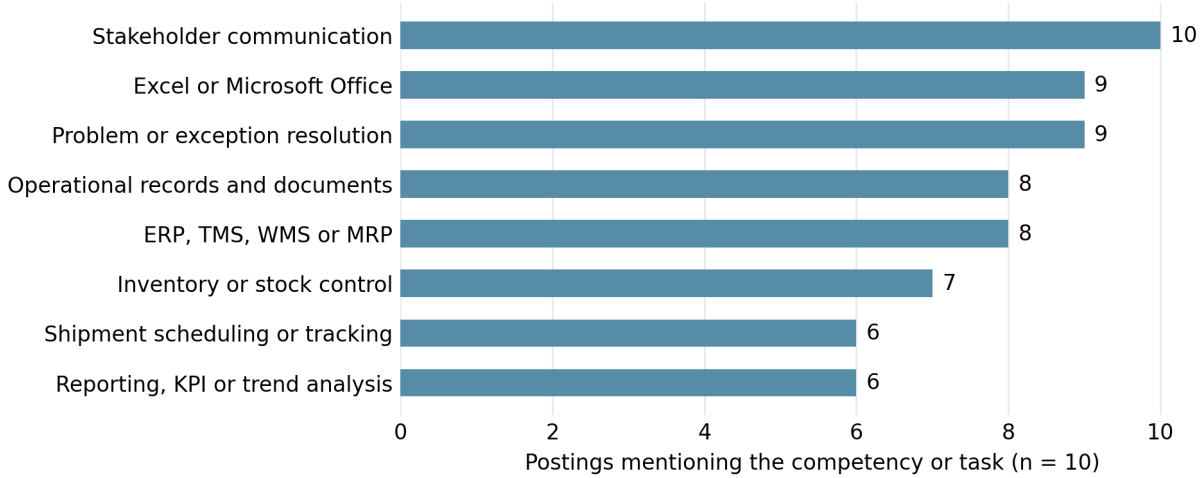

Competencies in Metro Vancouver Job Advertisements

To test that decision against the local market, I reviewed 10 advertisements in Vancouver, North Vancouver, Richmond, Surrey, and Burnaby, three of them published on LinkedIn and seven on employer, staffing-firm, or local job-board sites, of which six describe freight or logistics operations and four describe inventory or planning work. I counted each competency once per posting whenever it appeared as a requirement, an asset, or an explicit duty.

All 10 advertisements describe communication with customers, carriers, colleagues, or other stakeholders, nine mention Excel or Microsoft Office, and nine refer to solving problems or resolving exceptions, while eight include operational records and eight name an operating system such as ERP, TMS, WMS, or MRP. Inventory or stock control appears in seven postings, and shipment scheduling or tracking and reporting or analysis appear in six postings each, three of which (C, E, and J) require both, so the two counts only partly overlap, given that a shipment coordinator needs to keep freight visible, whereas an inventory coordinator is more likely to work with counts, discrepancies, and performance reports.

Figure 5

Competencies Mentioned in the Metro Vancouver Job Sample

Note. The unit is one job advertisement. The 10 postings are listed and coded in Appendix A.

Table 5 sets each of these requirements next to the evidence my profile currently offers and the action I plan to take, so that every change proposed for the profile can be traced back to what local employers ask for.

Table 5

Local Requirements, Current Profile Evidence, and Planned Actions

Requirement	Ads (of 10)	Current evidence in my profile	Planned action
Stakeholder communication	10	Freight-status updates at GLT	Lead with it in the headline, About and GLT entry
Excel or Microsoft Office	9	Microsoft Office listed in Skills	Confirm the Excel functions I can use independently
Problem or exception resolution	9	Not yet described	Add a verified example under GLT or Garage
Operational records and documents	8	Not yet described	Describe the records I handled once verified
ERP, TMS, WMS or MRP	8	SAP ERP listed in Skills	Attach SAP ERP to the role where I used it; add other systems only with evidence
Inventory or stock control	7	Stock movement and replenishment at Garage	Keep in the Garage entry and Skills

Requirement	Ads (of 10)	Current evidence in my profile	Planned action
Shipment scheduling or tracking	6	Freight-status updates at GLT	Keep in the GLT entry and About
Reporting, KPI or trend analysis	6	KPI-related skills, Power BI and Colombina indicator projects	Featured Power BI variance report

Note. Counts from Figure 5; posting-level codes in Table A1.

Segmentation, Targeting, and Positioning (STP)

I used segmentation, targeting, and positioning to decide which part of the labour market to address and what I can offer it, understanding segmentation as the grouping of audiences by their needs, targeting as the choice of the groups to prioritize, and positioning as the definition of the value I want those groups to associate with my profile (Gomez Albrecht et al., 2023).

Professional Audience Segmentation

The people who may encounter my profile fall into four groups, each of which plays a different role in the hiring process and looks for different information, as summarized in Table 6.

Table 6

Professional Audience Segments for LinkedIn

Audience	Role in the hiring process	Priority information
Talent acquisition / HR	Search, screen and coordinate applications	Matching titles, qualifications and skills
External recruiters / headhunters	Source candidates for client vacancies	Relevant specialization and availability
Logistics / operations managers	Evaluate operational fit and supervise teams	Examples of coordination, reliability and problem solving
Industry peers / contacts	Share vacancies, refer candidates and exchange expertise	Genuine interests, network participation and useful work

Priority Target Audiences

My primary audience consists of recruiters hiring for logistics, road freight, and distribution in Metro Vancouver, whom I prioritized because they screen candidates across roles

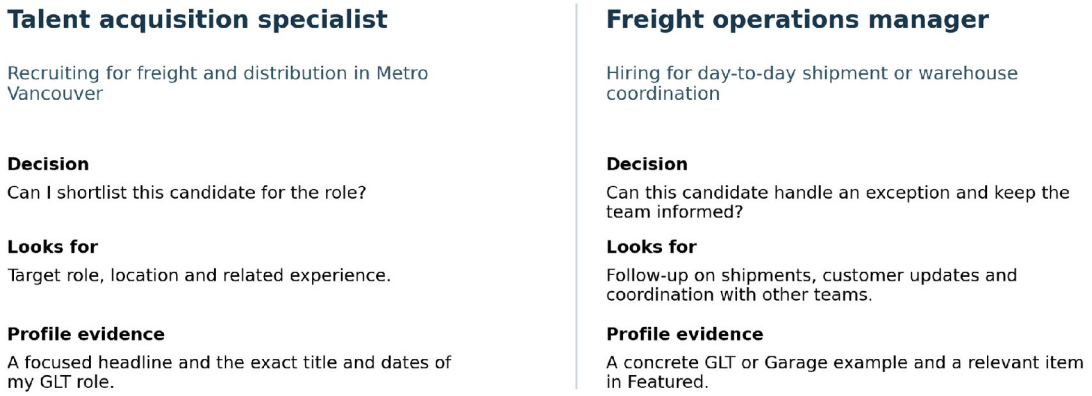

with similar titles but different requirements, because they can reach my profile through LinkedIn search and location filters (LinkedIn, n.d.-d), and because the local postings show employers such as DSV, Rolls Right, and Hecny Transportation Canada hiring for roles that match my experience. My secondary audience is formed by the operations managers who evaluate candidates for these roles and who, once a recruiter has shortlisted me, need to see evidence of the work itself.

Marketing Personas

I developed two personas from the vacancy descriptions and LinkedIn's search guidance in order to decide what information each reader needs to find in my profile, and Figure 6 captures how each of them approaches the hiring decision.

Figure 6

Marketing Personas for My LinkedIn Strategy

Note. Composite personas developed from the vacancy descriptions in Appendix A and LinkedIn's search guidance.

The recruiter persona is a talent acquisition specialist screening logistics and distribution applicants in Metro Vancouver, for whom a broad headline means having to infer what I coordinated and whether my experience fits the vacancy. The operations manager persona, on

the other hand, is responsible for a freight or warehouse team and needs someone who can keep an order moving when a plan changes, which is why this reader looks for evidence of how I handled a handoff or a status update.

Positioning Statement

I want to be known for freight coordination and inventory operations, with data analytics serving as a way to support those responsibilities, and while my experience at GLT and Garage gives me two examples of operational follow-through, my industrial engineering education and postgraduate study at Douglas College help explain why I am also interested in reporting, inventory accuracy, and process improvement.

In practical terms, I will lead with my freight and inventory experience, using the headline to identify that direction and the About and Experience sections to explain the work behind it, and whenever I include a tool or a performance claim, I will connect it to a specific role, project, or result that I am able to discuss.

Expressed as a formal positioning statement, my proposition reads as follows: for logistics recruiters and operations managers in Metro Vancouver, I am a logistics coordinator with an industrial engineering background who keeps freight and stock visible, because I have provided freight-status updates at GLT Logistics, coordinated stock movement and replenishment at Garage Clothing, and completed postgraduate studies in data analytics at Douglas College.

Marketing Mix: The 4Ps of Personal Branding

I applied the four Ps to my LinkedIn strategy (Gomez Albrecht et al., 2023), in which Product describes the experience I offer, Price gives me a basis for discussing compensation, Place identifies where I will reach employers, and Promotion sets out how I will show my work

and take part in conversations, with Table 8 summarizing the decision that resulted from each element.

Product: The Professional Value Offered

My offer combines freight coordination at GLT Logistics, stockroom operations at Garage Clothing, and earlier work in purchasing, planning, and operational indicators, a combination whose advantage is practical, since it allows me to speak about the customer side of a shipment as well as about the internal work needed to process and replenish stock. I will support the profile with descriptions of those responsibilities and with a work sample that demonstrates my analytical skills.

Price: Salary Benchmark

The Government of Canada Job Bank reports national hourly wages of CAD 21.63 to 44.79 for transportation logistics coordinators, with a median of CAD 29.49, and of CAD 19.90 to 45.00 for transportation logistics supervisors, with a median of CAD 28.85 (Government of Canada, n.d.-b, n.d.-c). These observations mainly cover 2023–2024 and the Job Bank pages were updated in November 2025, while Table 7 converts the same hourly ranges into annual wages on the basis of 2,080 working hours per year.

Table 7

Canadian Wages for Selected Logistics Occupations

Occupation	Low (CAD/year)	Median (CAD/year)	High (CAD/year)
Transportation logistics coordinator	$44,990	$61,339	$93,163
Transportation logistics supervisor	$41,392	$60,008	$93,600

Note. Annual values assume 2,080 hours per year (40 hours × 52 weeks). Data from Government of Canada (n.d.-b, n.d.-c).

I will use CAD 50,000–65,000 as a preliminary comparison range for coordination roles and then adjust my expectations to each job's scope, location, and schedule, considering that DSV's coordination posting in Richmond started at CAD 47,000, whereas Sandvik's inventory position in Surrey advertised CAD 60,000–75,000 (DSV, n.d.; Sandvik, n.d.). The national benchmark and the local advertisements therefore answer different questions, since the first situates the occupation as a whole and the second shows what a particular employer is offering.

Place: LinkedIn

LinkedIn is the channel where I will present my work history and make it easier for people in logistics to find me, although I will also use employer career sites whenever an advertisement directs me there, bearing in mind that a focused title, an accurate location, and relevant skills help a recruiter assess fit (LinkedIn, n.d.-a, n.d.-d).

I will follow employers such as Freightera, Purolator, Rolls Right, and DSV to learn what roles they advertise and what topics their teams discuss, and I will review each posting before applying, especially when the role requires a specific transport mode, language, or operating system.

Promotion: Evidence and Sustainable Values

I will use short posts and comments to show how I think about operational work, for example with one post that explains what a shipment update should include when an ETA changes and another that shows how I would check a discrepancy in an inventory count. In both cases I will draw on public data or on examples I am able to share and will answer the comments that raise a specific question (LinkedIn, n.d.-c).

The market research also provides a relevant sustainability topic, since Transport Canada (2026) reports that transportation accounted for about 22% of Canada's greenhouse gas

emissions in 2024 and Freightera (n.d.-b) describes options for lower-emission shipping, which would allow me to discuss how load consolidation or mode selection affects both service and emissions and to relate that question to my interest in planning.

Table 8

4Ps Applied to the Proposed LinkedIn Strategy

Element	Decision	How it will be evidenced
Product	Freight coordination and inventory operations	GLT and Garage duties, education and a work sample
Price	CAD 50,000–65,000 as an initial comparison	Check the location, scope, schedule and posted pay
Place	LinkedIn and employer career pages	Focused profile, local job searches and direct applications
Promotion	Practical examples and sector conversations	Posts, comments, a Featured item and relevant connections

LinkedIn Profile Review

The market analysis gave me the criteria for reviewing my profile, namely that a recruiter should be able to recognize the role I am targeting and that an operations manager should be able to see how my experience relates to the work, so I began with LinkedIn's guidance on completing a profile and then compared my existing wording with the skills and duties found in the local advertisements.

Recommendations for a Logistics Profile

LinkedIn recommends a recognizable professional photo, a background image, an About section that explains the professional story, and Experience and Skills sections that reflect career goals (LinkedIn, n.d.-a). The photograph therefore needs clear lighting, a simple background, and a crop that keeps the face recognizable on a small screen, while the banner can use the space beside the portrait to identify the area of work, and both elements should be checked on a laptop as well as on a phone.

The headline should name the work I want to be found for and use terms that fit my experience, and since LinkedIn explains that people search is personalized and considers profile attributes and filters such as location (LinkedIn, n.d.-d), the language of the vacancies becomes a useful starting point for choosing those terms. In my case, “Logistics Coordinator,” “Freight Transportation,” and “Inventory Management” are more specific than “Logistics” on its own, so I would use the role in the headline, explain the work in About and Experience, and attach a small set of relevant skills to the entries where I used them.

The About section can connect my experience across jobs by explaining the work I have already done, what I can offer, and the roles I am looking for, whereas the Experience section is where I can be more specific about what I handled and who depended on the information, as in providing a status update, coordinating with a carrier or warehouse, or resolving an issue that affects a shipment. When I have a verified result I can add its scope and period, and when I only know the responsibility, describing it accurately is enough.

Skills and Featured serve different purposes, because a skill such as SAP ERP describes what I can use, while a work sample shows how I apply an analytical method. Since LinkedIn supports adding relevant work, education, skills, and media to the profile (LinkedIn, n.d.-a), I would use a college project or a clearly labelled practice dataset to illustrate inventory analysis, explaining the question, the information used, and the operational decision it supports.

Analysis of My Current Profile

Photo and Banner

My current photo already gives a clear view of my face against a light background, so I would keep it as long as it is still current, and my banner is readable and already includes “Logistics Coordinator,” which is relevant to my target roles, although it also gives “Data

Analyst" its own line and therefore presents two possible directions. For that reason I would use "Freight Coordination and Inventory Operations" as the main message and let my education and work samples show the analytical side of my profile.

Headline and About

My headline currently reads "Industrial Engineering | Data Analytics | Logistics," which identifies my training and interests but still forces a recruiter to open my experience to learn that I have coordinated freight, so I would change it to "Logistics Coordinator | Freight Transportation and Inventory Management | Industrial Engineering" while keeping my current job title in the Experience section. My profile lists Canada as the location, and I would change it to Metro Vancouver if that accurately describes where I am based and looking for work, keeping my personalized URL and the English and Spanish versions of the profile, which already give me a useful starting point.

My About section currently opens with "I am an Industrial Engineer with an emphasis on operations," and although it describes purchasing, planning, stock, and software, the most relevant examples from GLT and Garage appear elsewhere and part of the space goes to general traits, so I would keep the purchasing and planning context and use the first lines to show how my experience relates to freight and inventory.

Proposed About Text

> I have a background in industrial engineering and experience in freight coordination, inventory and retail operations. At GLT Logistics, I kept customers informed about freight status and shared updates with the people involved in each shipment, and in my current role at Garage Clothing in Burnaby, I coordinate stock movement, replenishment and shipment processing to keep the sales floor stocked.

Earlier in my career, I worked in purchasing and planning and supported projects to improve operational indicators, and I also completed postgraduate studies in data analytics at Douglas College. I am interested in logistics and inventory coordination roles in Metro Vancouver where I can use that experience to support day-to-day operations and reporting.

Experience and Education

The first lines of my Garage and GLT entries already point to relevant work, which is why for Garage I would write “Coordinate daily stockroom activities, including inventory movement, replenishment and shipment processing to keep the sales floor stocked,” and for GLT, “Provided freight-status updates to customers and shared shipment information with the people involved in coordinating deliveries.” Once I can describe it accurately, I would add a second example under each role, such as how I followed up on a shipment exception or handled a stock discrepancy.

My Colombina entries show that I supported projects to improve indicators and worked on standardizing responsibilities, which links my earlier work to the operations and reporting side of my current search, so I would keep the exact role titles and dates, retain my industrial engineering education and Douglas College studies, and leave Google Project Management under Courses.

Skills, Languages and Featured

I already list Freight Transportation, Inventory Management, SAP ERP, Microsoft Office, Microsoft Power BI, and KPI-related skills, entries that give me a stronger starting point than a general list of personal qualities, so I would place Logistics Coordination, Freight Transportation, and Inventory Management higher and then associate SAP ERP, reporting, or

planning with the positions where I can explain their use. Some labels are duplicated across English and Spanish, as happens with Planning and Planificación, and some of them carry endorsements, which is why I would review those endorsements before merging labels and would keep the language proficiency information in the Languages section.

My Featured section is an opportunity to give an example of inventory analysis, for instance through a short Power BI report comparing recorded stock with counted stock by product, in which I would show how I calculate the variance and explain which discrepancy I would investigate first.

Activity and Recommendations

My visible activity consists mainly of short congratulatory comments, which help me stay in touch with colleagues but tell a recruiter little about my logistics interests. Following LinkedIn's suggestion to share relevant professional knowledge and start conversations (LinkedIn, n.d.-c), I would keep interacting with colleagues while adding comments that contribute a practical point, such as what information a dispatch team needs when an ETA changes, and I could also ask a former colleague or supervisor for a recommendation about specific work we did together.

Profile Assessment With ChatGPT and Resume Worded

I used ChatGPT (OpenAI, 2026) to compare the text of my headline, About, Experience, and Skills sections with the duties in the local advertisements, asking it to identify which requirements my profile already supported, which were present but difficult to find, and which needed more evidence. The comparison showed that my GLT and Garage entries already support freight communication, stock movement, and shipment processing, and that the main gap lay in

where that evidence appeared, since my headline was broad, my About section did not connect both jobs, and some relevant skills were scattered across duplicate entries.

The comparison also identified evidence I need to check, because Microsoft Office is already listed but I still need to confirm the Excel functions I can use independently, and SAP ERP is listed although the advertisements name several different systems. For that reason, I will add TMS, WMS, CargoWise, or advanced Excel only when I can show where I used them, instead of treating every term missing from my profile as a weakness, and Appendix C contains my prompt together with an explanation of how I reviewed the output.

Resume Worded's LinkedIn Review (Resume Worded, n.d.) will be applied to the profile before and after the changes, following the procedure described in Appendix C, so that its scores and section feedback can be compared with the conclusions reached through ChatGPT and with the requirements summarized in Table 5.

LinkedIn Analytics and Search Keywords

On November 11, 2026, which I recorded as the first day of the comparison, the dashboard showed 1,085 followers, zero post impressions in the seven-day window displayed, three profile viewers over 90 days, and six search appearances for October 27 to November 2, while the profile itself displayed "500+ connections." These figures measure different things, given that a search appearance records discovery through search, a profile view reflects someone opening the profile, and post impressions measure exposure to content (LinkedIn, n.d.-b, n.d.-e).

For search optimization, the terms I already use include Industrial Engineering, Data Analytics, Logistics, Freight Transportation, Inventory Management, SAP ERP, Microsoft Office, and Power BI, together with Logistics Coordinator in my banner. In the revised profile I will place the most relevant ones in the sections that support them, with "Logistics Coordinator"

in my headline and GLT title, freight status updates in my About section and GLT description, and inventory management and replenishment under Garage, while reporting and SAP ERP remain where I can explain their use. If LinkedIn provides searcher details or search terms in my account, I will record exactly what it shows, keeping that information separate from my own keyword list, which is only an inventory of the text I control.

I will use those measures to decide what to refine, so that if search appearances rise but profile views remain low, I will look again at how relevant my headline and location are to the jobs I am targeting, and if views rise without relevant connections or conversations, I will check whether my Experience and Featured sections give a reader enough reason to contact me. Likewise, if a post receives impressions but few reactions or comments, I will review its topic, opening, and question before choosing the next one, and although followers and connections will help me describe changes in my network, I will also consider whether the people I reach work in the areas I have selected.

Action Plan

I will first record the complete baseline and then revise the parts of my profile that affect how recruiters understand my experience, and the last day of the comparison will be the date on which I finish deploying the plan and record the final readings.

Table 9

Action Plan for My LinkedIn Profile

Stage	Action I Will Take	Evidence of Completion
Record the baseline	Save the profile and available analytics. Retrieve the exact connections count, following count, post breakdown and any available seven-day view count before editing.	Dated profile and analytics evidence, baseline values and Resume Worded report when available.
Revise the profile	Apply the selected banner, headline, About text and Experience wording. Reorder the skills and check the English and Spanish versions.	Before-and-after profile sections and a list of keywords added, retained or moved.

Stage	Action I Will Take	Evidence of Completion
Add evidence of my work	Choose an existing analytics project or prepare a labelled inventory example. Add the work sample to Featured and explain the decision it supports.	Featured item and a copy or link that shows the analysis and data source.
Publish and interact	Share a practical post on freight updates or inventory accuracy. Leave substantive comments and connect with relevant people in local logistics.	Links to posts and a record of relevant comments or connections.
Compare results	Record the final analytics using equivalent measurement windows. Compare the profile text, review feedback and performance by post.	Completed Table 10, a post-by-post record and dated after evidence.

First Publication Draft

When a pickup is delayed, the next person in the chain needs an update they can act on. From my work giving freight-status updates at GLT Logistics, I have found that a useful update includes the last confirmed status, the revised ETA, and who is following up, which gives the customer and the operations team a clear starting point for their next decision. If you work in freight or dispatch, what is the first thing you want to know when an ETA changes? #Logistics #FreightCoordination #SupplyChain #Dispatch

Key Measurements Before and After

Table 10 compares the values recorded on the first day with those that will be recorded on the last day of the plan.

Table 10

First-Day and Last-Day Comparison of My LinkedIn KPIs

Metric	First Day November 11, 2026	Last Day Date: _____	Change
People who follow me	1,085		
Connections	1,077		
Profile viewers in 90 days	3		
Weekly search appearances	6 (October 27–November 2)		

Metric	First Day November 11, 2026	Last Day Date: _____	Change
Posts in the dashboard activity window	0 shown (November 5–11)		
Articles published	0		
Photo posts	0		
Video posts	0		
Text, document and other posts	0		
Post impressions in seven days	0 shown		
Views by post or format, where available	Not recorded		
Reactions on posts	Not recorded		
Comments on my posts	Not recorded		
Search keywords used in my profile	See the first-day keyword list in the profile analytics section.		

For each post I will log the date, format, link, impressions, views when available, reactions, and comments, noting the format because impressions and views can differ from one format to another, and whenever I compare individual posts I will take each reading after the same elapsed time. An increase in search appearances or views would indicate greater visibility during the measurement window, while a recruiter message or a relevant discussion would show a different kind of result, and because I will be changing the profile and my activity at the same time, I will interpret any difference as a change observed during the plan.

Before-and-After Evidence

Appendix B contains my first-day profile and dashboard evidence, and I will use the evidence checklist in Appendix C to capture the same screen or data source at each checkpoint, so that every improvement I report names the change, cites its evidence label, and identifies the period that the metric covers.

Conclusion

The analysis showed that freight transportation, which generated 60.88% of Canadian freight and logistics revenue in 2025, has gone through five years that make shipment visibility, contingency planning, and customer communication especially valuable to employers, and the Metro Vancouver advertisements confirmed that emphasis, since all 10 required stakeholder communication and nine required Excel or Microsoft Office. For that reason, the revised profile leads with freight coordination and inventory operations, which my work at GLT Logistics and Garage Clothing supports, and presents data analytics as a tool for those roles. The action plan and the first-day baseline in Table 10 provide the means to check, once the plan is deployed, whether these changes make the profile easier to find and more convincing for the audiences I selected.

Appendix A

Job Advertisement Evidence

Table A1 provides the evidence and coding for the Metro Vancouver sample and Table A2 gives the direct links, while Table A3 keeps the national comparison in order to show how supervision, regulated operations, and systems work differ from my immediate job targets.

Table A1

Evidence and Coding for the Metro Vancouver Job Sample

ID and advertisement	Evidence and qualification examples	Codes
A · Rolls Right Logistics Coordinator · Vancouver (Rolls Right, n.d.)	Truck routing and tracking, bills of lading, Office, TMS, and customer issue resolution. Relevant experience may substitute for a preferred degree.	C, D, T, X, S, P
B · Domtar Traffic Office Coordinator · Surrey (Domtar, n.d.)	Shipment entry and closeout, carrier emails, completed files, and issue resolution with planners. SAP is an asset.	C, D, S, P
C · Rhenus Logistics Ocean Freight Coordinator · Richmond (Rhenus Logistics, n.d.)	Bookings, tracking, freight documents, claims and status reports. Three or more years in freight forwarding or logistics with strong ocean experience.	C, D, T, X, P, K
D · DSV Logistics Coordinator · Richmond (DSV, n.d.)	Truck tracking, filing, warehouse orders and load counts. Office and WMS are named. Dangerous Goods Certification is an asset.	C, D, T, X, S, I, P
E · Aston Carter Logistics Coordinator · Richmond (Aston Carter, n.d.)	Schedules and customs records, carrier performance, inventory and claims. One to two years of related experience. SAP and intermediate Excel appear under additional qualifications.	C, D, T, X, S, I, P, K
F · Hecny Transportation Canada Logistics Operations Coordinator · Vancouver (Hecny Transportation Canada, n.d.)	Tracks cross-border loads, maintains WMS inventory and follows up on exceptions. Excel and Outlook are listed. Working English plus Mandarin or Cantonese is requested.	C, D, T, X, S, I, P
G · Redwood Employment Inventory Control Specialist · Surrey (Redwood Employment, n.d.)	Cycle counts, audit records, discrepancy investigations, ERP and inventory analysis. Five or more years in manufacturing inventory or supply chain roles.	C, D, X, S, I, P, K
H · Seaspan Inventory Coordinator · North Vancouver (Seaspan, n.d.)	Cycle counts, stock accuracy, variance analysis and KPI reporting. Advanced Excel and MRP/ERP. Five years of manufacturing inventory and reporting experience.	C, X, S, I, P, K

ID and advertisement	Evidence and qualification examples	Codes
I · Sandvik Inventory Coordinator · Surrey (Sandvik, n.d.)	Stock parameters, inventory counts, demand planning support and performance reporting. Inventory experience and Excel are listed.	C, X, I, K
J · Holland Imports Purchasing Planner and Inventory Analyst · Burnaby (Holland Imports, n.d.)	Tracks factory and shipping milestones, manages POs, forecasts and inventory parameters. ERP and advanced Excel. SCMP or APICS/CPIM is preferred.	C, D, T, X, S, I, P, K

Note. C = stakeholder communication, D = operational records and documents, T = shipment scheduling or tracking, X = Excel or Microsoft Office, S = ERP, TMS, WMS or MRP, I = inventory or stock control, P = problem or exception resolution, K = reporting, KPI or trend analysis.

I coded D only when a posting explicitly referred to operational records, forms, or documentation, and S when it named a system or a type of system. P required an explicit reference to problem-solving, discrepancy investigation, or issue resolution, and for K I looked for formal reporting, performance measurement, or analysis that went beyond routine customer updates.

Table A2

Direct Links to the Local Job Advertisements

ID	Link to job description	Source type
A	Rolls Right · Logistics Coordinator · Vancouver	Employer or staffing firm career page
B	Domtar · Traffic Office Coordinator · Surrey	Employer or staffing firm career page
C	Rhenus Logistics · Ocean Freight Coordinator · Richmond	Employer or staffing firm career page
D	DSV · Logistics Coordinator · Richmond	LinkedIn job ad
E	Aston Carter · Logistics Coordinator · Richmond	LinkedIn job ad
F	Hecny Transportation Canada · Logistics Operations Coordinator · Vancouver	LinkedIn job ad
G	Redwood Employment · Inventory Control Specialist · Surrey	Employer or staffing firm career page
H	Seaspan · Inventory Coordinator · North Vancouver	Public copy of employer job text
I	Sandvik · Inventory Coordinator · Surrey	Public copy of employer job text
J	Holland Imports · Purchasing Planner and Inventory Analyst · Burnaby	Public copy of employer job text

Table A3

Additional LinkedIn Job Advertisements From the National Comparison

LinkedIn job advertisement	Operating context
CPKC · Assistant Trainmaster (Canadian Pacific Kansas City, n.d.)	Rail operations and supervision
Normandin Transit · Logistics Coordinator (Normandin Transit, n.d.)	Freight coordination in Quebec
Canada Post · Supervisor Operations Relief (Canada Post, n.d.)	Frontline operations supervision
Purolator · Operations Coordinator Hub Yard (Purolator, n.d.)	Parcel hub and yard coordination
Mullen Group · Senior Transportation Applications Specialist (Mullen Group, n.d.)	Specialized transportation systems
FedEx · Operations Administrator II (FedEx Canada, n.d.)	Operations administration
UPS · Distribution Supervisor I (UPS, n.d.)	Warehouse supervision
DHL Supply Chain · Operations Supervisor (DHL Supply Chain, 2026)	Distribution supervision
Amazon · Area Manager II (Amazon, 2026)	Fulfilment and team management

Appendix C

Tool Assessment and Final Evidence to Add

ChatGPT Assessment Record

Prompt framing for reproducing my comparison (OpenAI, 2026): “Compare my LinkedIn headline, About, Experience and Skills with these Metro Vancouver logistics and inventory job descriptions. Identify the requirements already supported by my work, the evidence that is hard to find, and the qualifications I should verify before adding. Suggest wording based on my actual duties.”

I checked the suggested wording against my GLT and Garage responsibilities and against the source advertisements. I kept a more focused headline, earlier placement of relevant experience, and clearer links between individual skills and work, and I set aside suggestions that would imply advanced Excel or experience with systems I have not confirmed.

Resume Worded Evidence

I will save the result of Resume Worded’s LinkedIn Review (Resume Worded, n.d.) for the profile before the changes, using a saved copy of the original profile if the tool allows it, and will record the review date together with any overall score or section feedback the service displays, after which I will repeat the review once the changes are applied. Both reports, or their relevant extracts, will be added here with an explanation of which feedback led to a change and how that change relates to a target job, and if the initial profile can no longer be submitted, I will label the first review with its actual profile version and date.

Evidence to Attach After Deployment

Table C1

Evidence for the Final Comparison

Evidence	What I Will Attach	Link to My Analysis
Profile sections	Before and after views of my headline, banner, About, Experience and Skills. Include Featured once it is published.	Show the revised wording and identify the vacancy requirement each change addresses.
Network counts	Dated views showing followers, following and exact connections when available.	Use the same source for first and last day. Enter both totals and the difference in Table 10.
Profile visibility	Dated views of weekly search appearances and profile viewers. Show the date ranges and any searcher data the account displays.	Compare like periods. Keep weekly views and rolling 90-day viewers on separate rows.
Content performance	A list of posts by format and date, each post link, and its impressions, reactions, views and comments when available.	Attach individual post analytics and the overall dashboard. Record the observation window.
Search keywords	The exact before-and-after text or a marked list of role titles, skills and other terms, with the section for each term.	Explain what moved, what was added and why it reflects my actual experience.
Tool feedback	Original and updated Resume Worded results if available, plus the ChatGPT assessment notes above and my review of the suggestions.	Report observed feedback and identify which suggestions I used.

I will label the final evidence by metric or profile section and include its capture date, stating in the table whenever a value is unavailable, and I will leave the last-day date and results blank until the comparison is complete, using Table C2 to record each publication and to mark as unavailable any metric that LinkedIn does not report.

Table C2

Record of Publications and Engagement

Date, Format and Link	Capture Date or Window	Impressions	Views	Reactions	Comments
